Drift desk: monthly evidence file (reference run)

Site: https://movahedi.ca | Cycle: 2026-11 | Reference run: yes | Method date: 2026-11-04 (UTC)

This file is the public reference implementation of the seven-step drift desk cadence. It records what was actually observed on movahedi.ca, how each host was classified and triaged, and the scorecard baselines. It is an open evidence record, not legal advice, and not a compliance certification.

1. What was observed

Pages fetched: https://movahedi.ca/, https://movahedi.ca/fr/, https://movahedi.ca/agents/ (static HTML)

Pre-consent cookies: none observed; no Set-Cookie on the homepage response

Scripts: first-party inline only, except GA4 (G-0MXQWZ2HBE via googletagmanager.com/gtag/js) and Microsoft Clarity (clarity.ms/tag/yg8hxymrwv), both loading only after an explicit analytics opt-in

localStorage: movahedi-cookie-consent (consent state, v1), movahedi-theme (functional)

Banner: CookieConsent island: Essential only / Accept analytics / Manage preferences, plus dismiss (essential only). Consent default: analytics_storage denied, ad storage denied.

Banner EN/FR: server-rendered copy is English on /fr/ pre-hydration; the React island applies French strings on hydration (Essentiels seulement / Accepter les analyses). Buttons symmetric after hydration.

Tag manager: none found; the GA4 loader URL is not a GTM container.

Server webhooks: none; no tag manager or server-side destinations on movahedi.ca.

2. Register diff

First reference cycle: the register below was created from this run. Changed: 0. Expired: 0. Unexplained: 0.

3. Register rows

host: googletagmanager.com | client_dom | Google LLC | analytics | gate | expires 2027-05-01

host: clarity.ms | client_dom | Microsoft Corporation | analytics | gate | expires 2027-05-01

host: challenges.cloudflare.com | client_dom | Cloudflare Inc. | security | approve | expires 2027-05-01

host: movahedi.ca | client_dom | first-party (site operator) | strictly_necessary | approve | expires 2027-05-01

4. Triage

GATE-2026-11-01 (clarity.ms, CA-05): Microsoft Clarity is session-replay capable but bundled under one generic analytics opt-in with GA4. Draft decision: keep gated; recommend a separate session-replay toggle or an explicit replay disclosure before the pilot phase. Citations: Law 25 s. 8.1; OPC-2023-001; CAI interfaces truquees composite.

GATE-2026-11-02 (googletagmanager.com, CA-05): GA4 loads only after explicit opt-in; consent default denied, ad storage stays denied. Draft decision: approve the gating; any scope widening needs a fresh v0.1 stamp.

FLAG-2026-11-01 (human_review_required): the /fr/ banner renders English copy before hydration. No trackers fire either way (analytics stay denied until opt-in); fix the SSR default strings.

NOTE-2026-11-01: Cloudflare Turnstile loads only when the visitor submits to the Ask movahedi.ca chat. Not pre-consent, not pre-interaction.

5. Method limits (honest)

Static HTML fetch only: no runtime DOM, so runtime-set cookies, runtime beacons, and hydrated banner text are outside what this run could observe. Pre-consent network behavior is inferred from the consent gate code (BaseLayout.astro), not from a live pre-consent session. A production client cycle runs the headless DOM crawl plus the read-only tag-manager/webhook manifest ingest.

6. Scorecard baselines

Supervision this cycle: 0.9 h (cap: 1.5 h per site per month)

First-pass KB accuracy: 3 of 4 hosts matched the cookie knowledge base; challenges.cloudflare.com was a KB gap (Security, manual)

Reversal rate: 0.0 (first cycle; no decisions issued yet)

Unexplained trackers: 0 (oldest unexplained tracker age: 0 days)

Signed stamps this cycle: 0 (no container publish proposed)

movahedi.ca/agents/drift-desk/ | corpus v2026.12.0 | C-36 behavioral-influence bar labeled pending (Bill C-36 is at second reading, not law).
