Check date: October 28, 2026 (UTC), October 27, 2026 in Toronto. Checks were run by public text fetch in this run. Results below are the records and grades returned on that date. A later change to DNS or to the site can change these results.

This document is a record of checks. It is not a certification and not an audit.

SPF

Record found at movahedi.ca (TXT), TTL 3600:

```
v=spf1 include:_spf.mlsend.com include:_spf.google.com -all
```

The record ends in -all, a hard fail for senders not listed in the record.

DKIM

Record found at google._domainkey.movahedi.ca (TXT), TTL 300: a DKIM record is published for the Google selector, using RSA keys. The public key itself is not reproduced here; it is public DNS and can be read from the record named above.

DKIM for any other selector was not checked in this run, and no claim is made for any other selector.

DMARC

Record found at _dmarc.movahedi.ca (TXT), TTL 300:

```
v=DMARC1; p=quarantine; rua=mailto:d84191ec55384251b27b444ab7718e5c@dmarc-reports.cloudflare.net
```

The policy is quarantine. No strict rejection policy is claimed, because the published policy is quarantine, not reject.

Mail routing

MX records found at movahedi.ca (TTL 3600), in priority order: 1 aspmx.l.google.com, 5 alt1.aspmx.l.google.com, 5 alt2.aspmx.l.google.com, 10 alt3.aspmx.l.google.com, 10 alt4.aspmx.l.google.com.
