Reviewer's Guide to the Due-Diligence Package

Movahedi Solutions, 1000823315 ONTARIO INC., Mississauga, Ontario, Canada

Date: October 27, 2026 | Contact: mohammad@movahedi.ca

1000823315 ONTARIO INC., operating as Movahedi Solutions, Mississauga, Ontario, Canada.

This guide sits next to the self-assessments. It tells a reviewer where to find each answer, in plain terms. Start with the question, then open the document and section named beside it.

Contact: mohammad@movahedi.ca

Where to find each answer

Encryption and header scan evidence

- Vendor Security Questionnaire, Category E, sections E1 to E3: the public site is served over HTTPS, and the header scan evidence sits here.
- Vendor Security Questionnaire, Category D, section D3: the position on encryption for client engagement material.
- Cybersecurity Self-Assessment (NIST Cybersecurity Framework), section 5, Protect, and section 9, Evidence, limits, and contact: the same site evidence, in framework order.
- Security Practices, sections on how the public site is served and on the header scan result.

What the evidence is, stated plainly: the header scan is a third-party header scan of the public site, movahedi.ca, with grade A+, on Oct 28, 2026, at 00:59 UTC, at https://securityheaders.com/?q=https://movahedi.ca&followRedirects=on. It is a header scan of the public site. It is never a penetration test. No encryption standard for client data is claimed. The encryption and transfer method for an engagement are confirmed in writing for that engagement, as stated in Vendor Security Questionnaire section D3.

Incident and disclosure handling

- Vendor Security Questionnaire, Category G, section G2: the incident contact route, mohammad@movahedi.ca.
- Cybersecurity Self-Assessment, section 6, Detect, and section 7, Respond: how a problem is noticed, and how a confirmed problem is handled for the public site and for an engagement.
- Responsible Disclosure: scope (movahedi.ca only), what to include in a report, what not to test, what not to include, how reports are handled, and the acknowledgement and re-check process.
- Privacy Self-Assessment, section 4.5, Breach notification: breach response tools and advisory

support provided for a client program, where that is the service engaged.

Data handling

- Vendor Security Questionnaire, Category B, sections B1 to B5: what the public site stores, how engagement material may be used, and what happens at the end of an engagement or on client instruction. Section I5 covers sale, training use, and public naming in one place.
- Cybersecurity Self-Assessment, section 2, Systems in scope, and section 5, Protect: the client data rules for engagements, in short form.
- Privacy Self-Assessment, section 5, Client data handling in engagements, and section 6, What is confirmed per engagement.
- Privacy and Data Handling: how client material is used, access limits, end-of-engagement removal, return, or deletion, and public naming.

Company, services, and contact

- Vendor Security Questionnaire, Category A, sections A1 to A3: legal name, trade name, location, business type, the seven services, and the single contact route.
- Cybersecurity Self-Assessment, section 1, Status and scope, and section 2, Systems in scope.

Third parties and the public site stack

- Vendor Security Questionnaire, Category J, section J1, and Category D, section D1: the third parties that deliver the public site, and how it is built, deployed, and delivered.
- Security Stack: the plain list of tools for the public site, Cloudflare for delivery over HTTPS, and GitHub for source and deployment.

Credentials

- Vendor Security Questionnaire, Category H, section H4: founder credentials, personal only, ISC2 CC, CIPP/C, and Six Sigma Black Belt. No company certification is held.

A note on cloud questions

For questions about cloud delivery and hosting of the public site, use Vendor Security Questionnaire Category D, Infrastructure and hosting, and Category E, Website security. Those sections carry the verified position: delivery over HTTPS through Cloudflare, built and deployed from GitHub, with the header scan in E2 and E3. A reviewer who needs a tailored answer for a specific procurement can request it through mohammad@movahedi.ca, using the route in Vendor

Security Questionnaire section 16, Request route for a tailored response.
